- ✓ Developments of novel and integrated farming models
- ✓ Preparation of market entry plan
- ✓ Handle large scale commercial projects
- ✓ Infrastructure management (polyhouse, vertical farming, cold storage, ripening chamber, warehouse (cold/dry), laboratories).
- ✓ Farm Credit And Insurance
- ✓ Farm operations Improvements
- ✓ Raw material management/ Agriculture resource management.
- ✓ Finance and subsidy consulting
- ✓ Rural development

The ultimate goal of farming is not growing crops, but the cultivation & perfection of human being

05

Core Services

Customer Satisfaction Is Our Priority

Analyzing The Problem

Research & Development

- Field visit (for soil sampling, water sampling, mapping field layout, analyzing the existing workplace, data collection, field study)
- Survey (agriculture field survey, market survey)
- Using in-house technology to data collection to analysis using sophisticated technology

Analysis of the Problem

- Consulting with the functional experts

Guidance & Training

- Conducting professional training seminars (field and virtual training)
- Developing a training paradigm to ensure long-term, consistent increases in agricultural output.
- Development of management plans for farms

Providing Detailed Report

- Highlights the project's **HOW, WHAT and WHY**

06

F

CUS
Sector

Soil Management

Soil management is a key component to the success of site-specific cropping systems management. It starts with a farmer's capacity to vary tillage and inputs according to soil conditions and needs.

The soil chemical and physical characteristics has a major influence, both direct and indirect, on its fertility and it's production

Services provided

- ✓ Soil- water testing and plant analysis
- ✓ Fertilizer recommendations based on soil testing
- ✓ Wasteland restoration services by planting, monitoring and maintain trees
- ✓ Training programs, Educating farmers about soil science
- ✓ Soil analysis and soil management
- ✓ Data analysis and interpretation, Report preparation

Soil is more valuable than oil

Horticulture and Crop Production

Horticulture crops primarily includes fruits, vegetables, decorative, aromatic plantation and medicinal plants.

Our Services

- ✓ Providing high yielding and disease free planting material.
- ✓ Developing better post harvest technology in order to minimise the loss.
- ✓ Identifying niche areas for the promotion of crop specific precision farming.
- ✓ Create opportunities for export of high value of commodities.
- ✓ Provide good solutions in supply chain management.
- ✓ Suggest micro irrigation/ precision irrigation products.
- ✓ Post harvest management value addition of products.
- ✓ Safe import and export etc.
- ✓ Analysing the market potential for company's product.
- ✓ Market Feasibility Study on production, pricing and quality trends
- ✓ Exploring distribution channels and business models
- ✓ Dissemination of information on modern farm practices to improve quality, quantity and reduced cost of production

Grow Your Health, Grow Garden

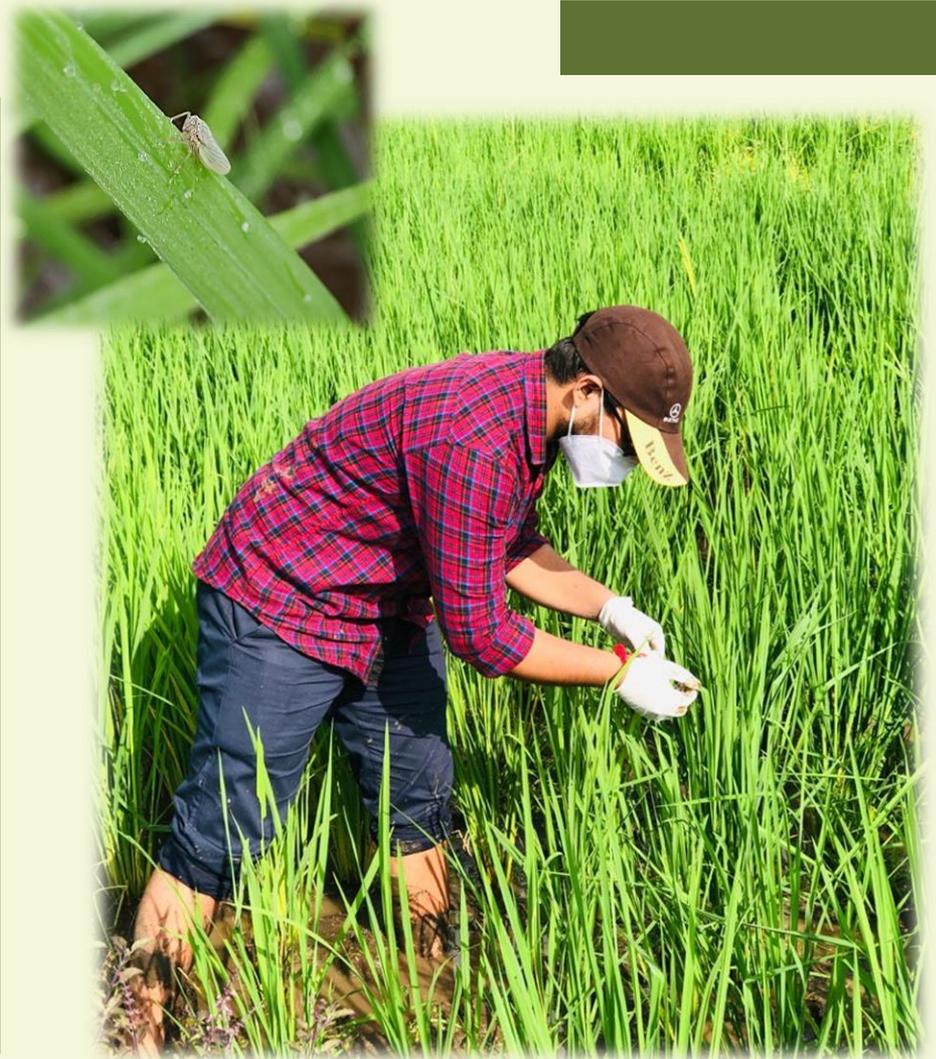

Entomology

Without crop protection (including pesticides) more than half of the world's crops would be lost to insects, diseases and weeds.

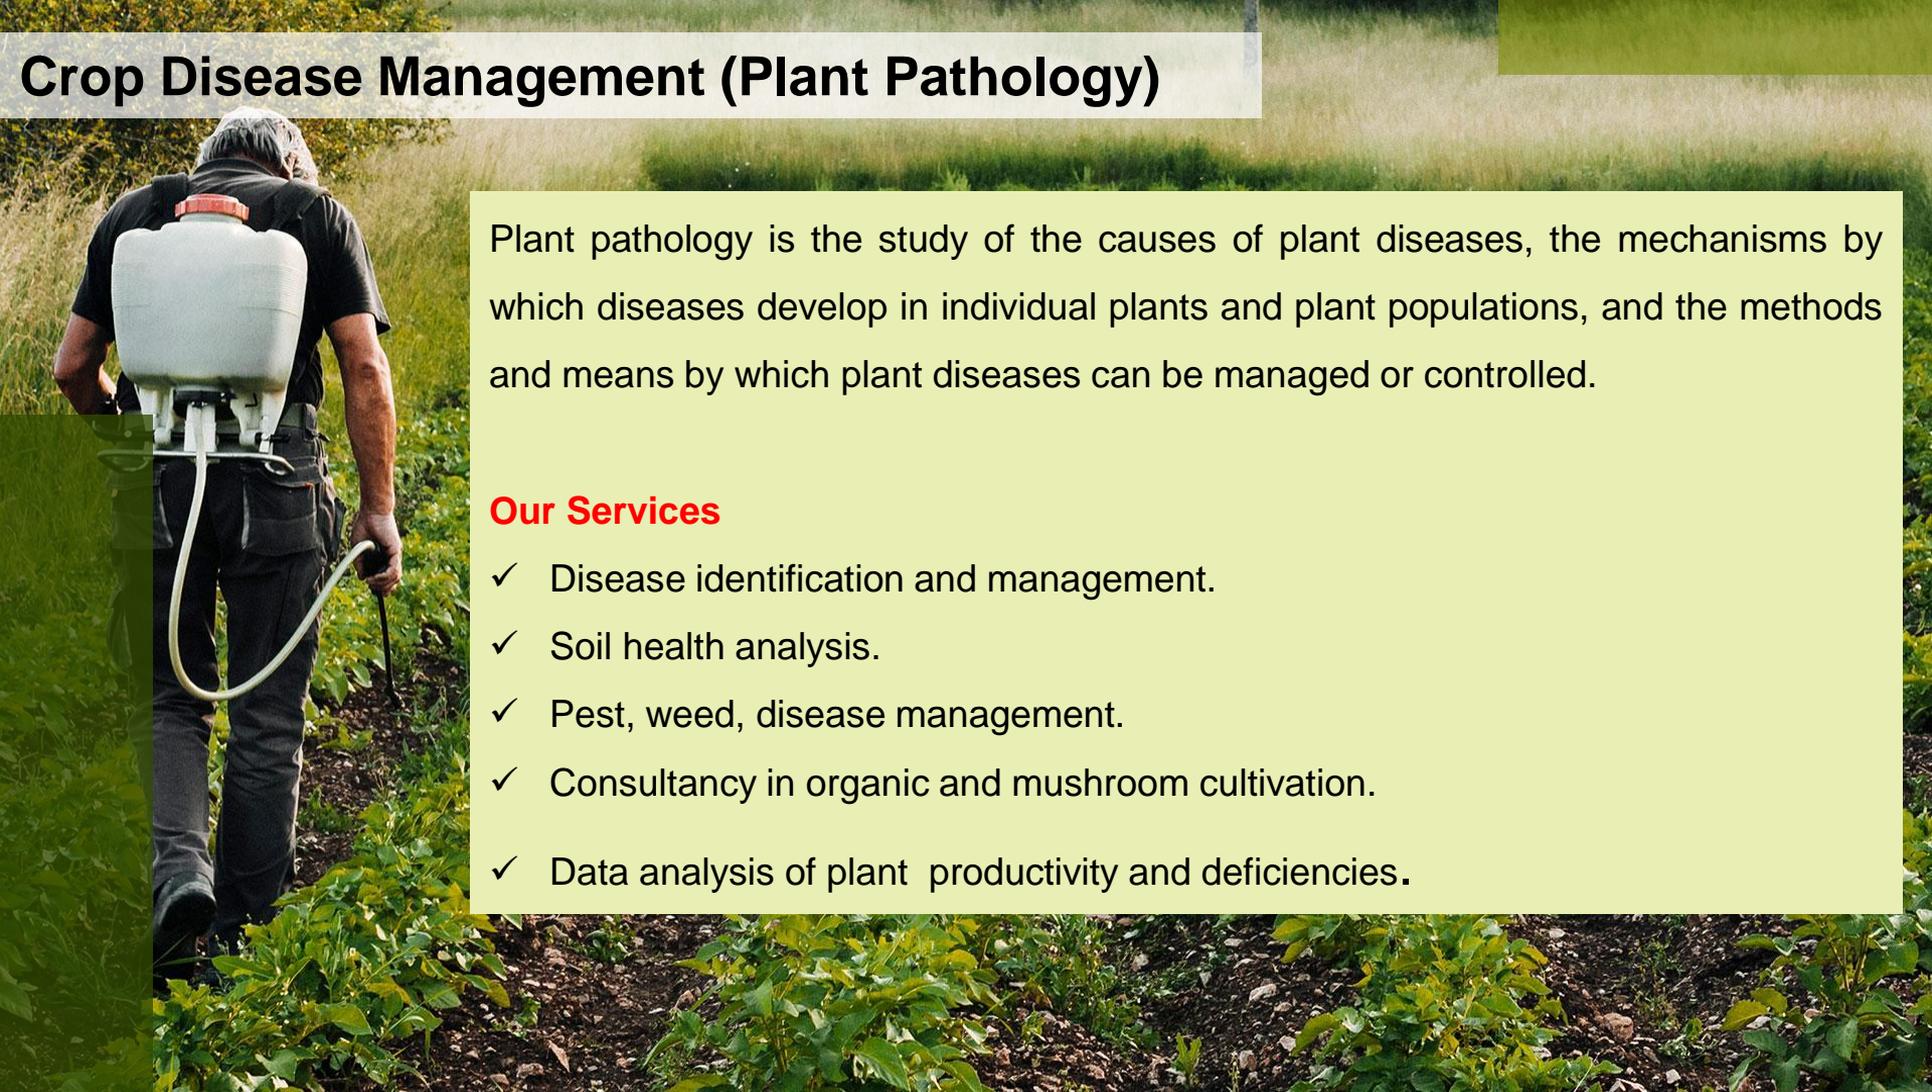

The goals of plant protection are to prevent loss or harm to production by parasites or diseases and protection of other environmental resources.

Our Services

- ✓ Provides insect identification, research and development unit of predators, parasitoids and pathogens
- ✓ Surveying the field
- ✓ General collecting and handling techniques
- ✓ Preparation of specimens for laboratories and educational purposes
- ✓ Apiculture, sericulture, lac culture

Crop Disease Management (Plant Pathology)

Plant pathology is the study of the causes of plant diseases, the mechanisms by which diseases develop in individual plants and plant populations, and the methods and means by which plant diseases can be managed or controlled.

Our Services

- ✓ Disease identification and management.
- ✓ Soil health analysis.
- ✓ Pest, weed, disease management.
- ✓ Consultancy in organic and mushroom cultivation.
- ✓ Data analysis of plant productivity and deficiencies.

Genetics and Plant Breeding

Plant breeding is the science of modifying plant traits to produce desired characteristics. It has been used to improve the nutritional quality of human and animal products.

Our Services

- ✓ Advanced solutions for open field grain production
- ✓ Provide solutions for soil/soil-less/ hydroponic growing methods adapted to the unique characteristics of each location and projects
- ✓ Provide training based on their roles and responsibilities (breeders, technicians, system administrators and data managers)
- ✓ Assistance on matters of agronomy, pheno-typing, molecular breeding or the application of breeding methods

Animal Nutrition (Dairy and Poultry)

Dairy farming is the agricultural practice of growing and using dairy animals. Poultry farming is keeping birds either home or commercially for the purpose of generating eggs, meat, and other products.

Our Services

- ✓ Provides consultancy for entrepreneurs for establishing ventures in poultry
- ✓ Integral solutions of milk production and processing of dairy products
- ✓ Black Soldier Fly Rearing Unit
- ✓ Provide market for selling livestock goods
- ✓ Cattle & Poultry Feed manufacturing business
- ✓ Aquaculture

Giving You The Right Nutrients.....

Agriculture Ergonomics

Human factors and ergonomics is the application of psychological and physiological concepts to the engineering and design of goods, processes, and systems. Ergonomics is a multidisciplinary discipline that seeks to improve the fit between the job and the person in order to ensure their health and safety.

- ✓ Work and work evaluation
- ✓ Work load assessment
- ✓ Risk assessment
- ✓ Imparting interventions/ training
- ✓ Provide ergo tools and techniques
- ✓ Suggest ergonomics job improvement method

07

Our Goals

To be globally recognised

To sustain and revive traditional agriculture

Provide end to end farming solutions

Sustainable farm solutions and holistic sustainable farm services

Process efficiency enhancement

Customer Satisfaction

A collage of fresh green vegetables. In the foreground, a wicker basket is filled with artichokes and basil. In the background, there are zucchini and more artichokes. The entire image has a green tint and a semi-transparent dark green rectangle in the center containing white text.

**If Agriculture goes wrong,
nothing else will have a
chance to go right.**
